

QC PATINA STAIN

COLOR THAT PERFORMS: Our signature stains create expanses of rich color and marbled hues from plain, gray concrete. Inside or outside, infuse your walkways, driveways, pool decks, patios, plazas, street pavements and more with gorgeous color and beautiful patina. Transform residential, commercial or municipal concrete paving with QC PATINA STAIN.

COLOR THAT IS UNIQUE: QC PATINA STAINS produce a rich but variegated finish unique to each surface. Instead of covering up the concrete like a paint or a coating, stains infuse color into the surface while also showcasing the character of the substrate. The translucent effects and the broad drifts in color – considered hallmarks of stains and not defects – give surfaces the appearance of timeworn patina.

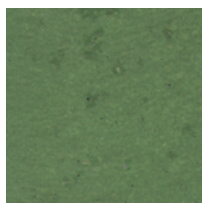

COLOR THAT LASTS: Our stains are slightly acidic combinations of metallic salts in water-based solutions. By reacting with the free lime available after concrete has fully cured, stains penetrate and etch new or existing concrete that is free from sealers, paints, and other forms of resists. Stains form permanent precipitates, becoming part of the concrete. Color remains in the concrete pores which means color won't chip, crack, fade or peel. To make your color last, QC CONSTRUCTION PRODUCTS offers a full range of high performance sealer systems that will preserve and maintain your stained surface.

PRODUCT SYSTEM: QC PATINA STAINS are part of the QC STAINING SYSTEM. For best results the use of QC CON CLEAN*, QC CONCRETE DEGREASER & NEUTRALIZER*, QC Sealers and QC Finish Coatings are recommended. QC PATINA STAINS may be diluted with QC PATINA STAIN EXTENDER DILUTION LIQUID* to achieve softer colors. Do not use water to dilute QC PATINA STAINS.

PRODUCT NOTE: QC PATINA STAINS can be used over QC COLOR HARDENER*, QC COLORTECH -E*, QC COLORTECH*, QC THIN-PAVE NI*, QC CONCRETE RESURFACER* and QC CONCRETE RESURFACER HD*.

PRODUCT LIMITATIONS: The standard QC PATINA STAIN colors on this chart are shown applied to both uncolored (gray) concrete and a QC COCONUT COLOR HARDENER* base. However, QC PATINA STAIN produces unique effects to each individual concrete substrate and may differ significantly from the colors shown on this chart. QC PATINA STAINS will produce a wide range of finished colors depending on many factors including, but not limited to finishing techniques, mix design, curing practices, base color, surface porosity, sealer use, and age and condition of existing concrete slabs. There is an element of uncertainty and unpredictability inherent in the use and final appearance of QC PATINA STAINS including uneven, mottled or translucent effects. Concrete that has been extremely hard-troweled may be difficult to stain. Before applying stain, it is strongly recommended the stain be tested in an inconspicuous area.

† Blue and green stains are not recommended for exterior application. Blue and green stains react to the presence of moisture and can create a black, spotty effect over time.

PRODUCT NOTES:

- QC PATINA STAINS are available in 1-, 5- and 55-gallon units (3.8- and 208.2-liter units), in eight standard colors.
- Use QC PATINA STAIN EXTENDER DILUTION LIQUID* to yield variations of standard colors.
- QC PATINA STAIN coverage rates range from approximately 200-400 square feet per gallon, per coat. Actual coverage may vary depending on texture, porosity and condition of the concrete, application method and other local conditions. Please refer to the QC PATINA STAIN Product Information Bulletin for product and application details.

Recommended Sealers:

- QC SURPRO (SB or WB MATTE)*
- QC CEMSEAL*
- QC SOLVENT SEAL 18*, 23* or 27*
- QC SOLVENT SEAL VOC III*

- QC PERMASEAL*
- QC VOC 100 WB*
- QC ULTRA SEAL*
- QC ULTRA SEAL 100 VOC*

Top Coat Sealers:

- QC INTERIOR FLOOR FINISH GLOSS*
- QC NATURAL BEAUTY MATTE*

*PLEASE REFER TO THE QC WEBSITE FOR THE CORRESPONDING PRODUCT INFORMATION BULLETIN CONTAINING TECHNICAL AND APPLICATION DATA.
