Section I - Product Identification

Product Name: QC Concrete Dye Solvent Based - Dandelion
Company: QC Construcion Products 11901, Gavin Rd, Laredo Tx, 78045
Chemical Name: N/A
Chemical Family: Proprietary
Chemical Formula: Proprietary
D.O.T. Hazard Class: Paint, 3, UN1263, III
Appearance & Odor: Clear liquid, sweet odor.
Emergency Telephone Number: CHEMTREC (800) 424-9300
Telephone Number for Information: 956 622 7677
Product Use: QC Construcion Products 11901, Gavin Rd, Laredo Tx, 78045

Section II - Hazards Identification

Hazard Symbol:

Emergency Overview

Central nervous system depression is the most common effect, resembling intoxication by ethyl alcohol. Excitation is followed by impaired motor coordination, slurred speech, sensory disturbances such as double vision and vertigo, flushing of the face, rapid pulse, and sweating. Nausea and vomiting are common. Other symptoms include dryness of the mouth and throat, headache, sleepiness, dizziness, light-headedness, weakness, and loss of energy. Very high exposures may cause unconsciousness, coma, or death. Kidney toxicity may occur but is rare following acute exposure. Post-alcoholic headache and gastritis are common in recovery. Inhalation exposure may cause lung irritation and cough. Skin contact may result in redness, irritation, and dermatitis since acetone has a drying effect on the skin. Contact with eyes can result in irritation and eye injury.

Acute Potential Health Effects/ Routes of Entry

Inhalation: May cause moderate irritation to the respiratory system. May cause nausea, headaches, and dizziness. May cause drowsiness, weakness, and fatigue.
Eyes: Vapor and/or mist may cause eye irritation. Direct contact may cause temporary redness and discomfort.
Ingestion: May cause irritation to the mouth, throat and stomach. May cause gastrointestinal irritation, nausea, and vomiting.
Skin: May cause moderate irritation.

Aggravated Medical Conditions
Pre-existing eye, skin, liver, kidney, and respiratory disorders may be aggravated by exposure.

Chronic Health Effects

Irritation of the eyes, nose, and throat are the most common problems associated with chronic exposure to acetone. Central nervous system effects such as dizziness and sleepiness can occur, as can dryness, irritation, and inflammation of the skin.

Target Organs: Skin, Eye, Lung, Liver, Kidney, Nerve, Reproductive

QC Concrete Dye Solvent Based - Dandelion

Page 1 of 6
Section IV - First Aid Measures

Remove victim from area of contact. Get immediate medical attention for any significant overexposure.

Inhalation: If victim is overcome, remove to fresh air and call a physician. If breathing is irregular or has stopped, administer artificial respiration. Keep the affected person warm and at rest. Get medical attention as soon as possible.

Eye contact: Immediately flush eyes with room temperature water for at least 15 minutes, occasionally lifting the lower and upper lids. Consult an ophthalmologist without delay.

Skin contact: Wash thoroughly with water. If clothing is contaminated, promptly remove clothing and wash the skin with soap and water for at least 15 minutes. Get medical attention promptly. If systemic effects are observed, first aid procedures are the same as above for inhalation.

Ingestion: If victim has swallowed large amounts and is conscious and not convulsing, induce vomiting (30 ml syrup of Ipecac for adults, one or two doses) and call a physician promptly. Induction of vomiting should only be considered if it can be performed soon after ingestion due to the potential for acetone to cause CNS depression and subsequent aspiration. Never give fluids to an unconscious person.

Section V - Fire Fighting Measure

Flash Point -17°C (closed cup)
Flammable Limits (% By Vol.)
Lower Explosive Limit (LEL) 2.6
Upper Explosive Limit (UEL) 12.8
Autoignition Temperature 869°F
Fire Fighting Procedures/Fire Extinguishing Media

Keep unnecessary people away; isolate hazard area and deny entry. Avoid breathing vapors, stay upwind. Do not enter fire area without structural firefighter's protective equipment including NIOSH approved self-contained breathing apparatus in positive pressure mode. Use water spray to knock down vapors. Use carbon dioxide extinguishers or dry powder for small fires. Large fires are best controlled by alcohol foam, fog, and water spray. Use water spray to cool containers exposed to acetone fires. Stay away from ends of tanks. Withdraw immediately in case of rising sound from venting safety device or any discoloration of tanks due to fire. Isolate for 2 mile in all directions if tank, rail car, or tank truck is involved in fire.

Unusual Fire and Explosion Hazards

Dangerous fire hazard when exposed to heat, sparks, flame, or oxidants. Containers may explode in heat of fire. Vapors of acetone are heavier than air, and may travel considerable distance to a source of ignition and flash back.

Do not use a direct stream of water on acetone fires, as direct water streams have a tendency to spread acetone fires. Water solutions of acetone may still be flammable because of released vapors.

Section VI - Accidental Release Measures

Shut off all ignition sources. No smoking or flares allowed in the spill area. Restrict access to the spill area, and move unprotected personnel upwind of the area. Allow only trained personnel wearing appropriate protective clothing and self-contained breathing apparatus in the vicinity of the spill. Prevent from entering water bodies, drains or any sewage collection systems. For small spills, take up with sand or other absorbent material and place into containers for later disposal. Control large spills by diking. Dispose spill material in accordance with federal, state, and local regulations.

Section VII - Handling and Storage

Store in a well ventilated place, away from sources of ignition and direct sunlight and in accordance with 29 CFR 1910.106. should be stored in drums or storage containers made from non-flammable materials. Store away from plastics, oxidizing materials, mineral acids, and chloroform. Store in an area equipped with automatic sprinklers or fire extinguishing system. All storage and transfer equipment should be electrically grounded and bonded to prevent possible ignition from static sparks. Use spark resistant equipment to store acetone. Do not use air pressure to unload from containers. Containers of this material may be hazardous when empty. Since emptied containers retain product residues, assume emptied containers to have the same hazards as full containers. Wear appropriate protective equipment when handling.
Section VIII - Exposure Controls / Personal Protection

Personal Protection Equipment

Respiratory Protection
Use appropriate NIOSH approved respirators in accordance with 29 CFR 1910.132 and 1910.134, to prevent overexposure. Respirators must be selected based on the airborne levels found in the workplace and must not exceed the working limits of the respirator.

Ventilation
Provide local ventilation to maintain exposure levels below recommended exposure limits. Use explosion proof ventilation equipment. Local exhaust ventilation should comply with OSHA regulations and the American Conference of Governmental Industrial Hygienists, Industrial Ventilation - A Manual of Recommended Practice.

Eye Protection
Use splash proof chemical safety goggles. Follow the eye and face protection guidelines of 29 CFR 1910.132 and 1910.133. Where there is any possibility that individual's eyes may be exposed to acetone, an eye wash fountain (in accordance with 29 CFR 1910.151) should be within the immediate work area for emergency use.

Protective Gloves
Use butyl or neoprene gloves.

*NIC - TLV Notice of Intended Changes

Other
Where there is a possibility of exposure of an individual's body to acetone, facilities for quick drenching of the body should be provided (in accordance with 29 CFR 1910.151) within the immediate work area for emergency use. Such individuals should be provided with and required to use impervious clothing in accordance with 29 CFR 1910.132.

Section IX - Physical and Chemical Properties

- **Form:** Liquid
- **Odor:** Sweet
- **Color:** Specified
- **pH value:** Unspecified
- **Solvent content:** 97-99%
- **Total solids/Non-volatiles:** < 1-2%
- **Total VOC:** N/A
- **Solvents by weight:** 98-99%
- **Specific gravity:** Unspecified
- **Solidification temperature:** Unspecified
- **Freezing/Melting point:** Unspecified (do not allow product to freeze)
- **Boiling point:** 133 °F (56 °C)
- **Vapor density:** 2.0
- **Vapor pressure:** 185 mm Hg @ 68 °F (20 °C)
- **Evaporation Rate:** 7.7 (Butyl Acetate=1)
- **Solubility in water:** Miscible

Section X - Reactivity / Stability

- **Stability:** Stable under normal conditions
- **Polymerization:** Hazardous polymerization does not occur
- **Hazardous Decomposition Products:** Combustion yields carbon dioxide and carbon monoxide
- **Incompatible Materials:** Acids and strong oxidizing materials
Environmental Fate: The following information is extracted from the TOXNET database maintained by the National Library of Medicine.

Atmosphere: Based on an experimental vapor pressure of 231 mm Hg at 25 deg C, is expected to exist solely as a vapor in the ambient atmosphere. Vapor-phase is degraded in the atmosphere by reaction with photochemically produced hydroxyl radicals with an estimated atmospheric half-life of 71 days. Acetone also undergoes photodecomposition by sunlight with an estimated half-life of about 80 days.

Terrestrial: Is expected to have very high mobility in soils based upon an estimated Koc value of 1. Volatilization from dry soil surfaces is expected based upon the vapor pressure of this compound. Volatilization from moist soil surfaces is also expected based upon the measured Henry's Law constant of 1.87x 10^-5 atm-cu m/mol.

Aquatic: In water, is not expected to adsorb to suspended solids or sediment based upon its estimated Koc value. Volatilization from water surfaces is expected to be an important environmental fate process given its estimated Henry's Law constant. Estimated half-lives for a model river and model lake are 38 and 333 hours, respectively. Experimentally determined volatilization half-lives in a shallow stream were measured in the range of 8-18 hours.

Biodegradation: This compound is expected to biodegrade under aerobic and anaerobic conditions.

Ecotoxicity:

LC50 Daphnia magna 10 mg/L 24 to 48-Hr
LC50 Lepomis macrochirus (bluegill sunfish) 8,300 mg/L 96 hr
LC50 Salmo Gairdneri (Rainbow Trout) 5,540 mg/L/96 hr @ 12 deg C (95% Confidence Limit 4,740-6,330 mg/L), wt. 1.0 g

</tbody>
</table>

TCLO = Lowest air concentration that is toxic to a given species.

LC50 = Air concentration that is lethal to 50% of a given species in a given period of time.

LD50 = Dose that is lethal to 50% of a given species by a given route of exposure.

Biodegradation:

This compound is expected to biodegrade under aerobic and anaerobic conditions.

Disposal Considerations

Waste disposal of substance:
Dispose of in accordance with local, state and federal regulations. It is the waste generator’s responsibility to determine if a particular waste is hazardous under RCRA (EPA regulations for hazardous waste).

Container disposal:
Dispose of in a licensed facility. Recommend crushing, puncturing or other means to prevent unauthorized use of used containers.

RCRA:
None.
Further information:

consideration of the user, subject to their own investigation of compliance with applicable regulations, including the safe use of the product under every foreseeable condition.
